

Tree — data structure made of nodes with root and leaves

← NOT BST

Binary Tree: each node has  $\leq 2$  children

BST: at each node, all data in left descendents is less, all data in right descendents is greater.

Remove

1. No children
2. 1 child.
3. 2 children

Function  $\text{remove}(\text{node}, \text{key})$

If  $\text{node} \rightarrow \text{key} < \text{key}$ :

If  $\text{node} \rightarrow \text{right}$  is NULL:  
throw exception

Else:

$\text{node} \rightarrow \text{right} \leftarrow \text{remove}(\text{node} \rightarrow \text{right}, \text{key})$

ElseIf  $\text{node} \rightarrow \text{key} > \text{key}$ :

If  $\text{node} \rightarrow \text{left}$  is NULL:  
throw

Else

$\text{node} \rightarrow \text{left} \leftarrow \text{remove}(\text{node} \rightarrow \text{left}, \text{key})$

Else:

(continued ↓)

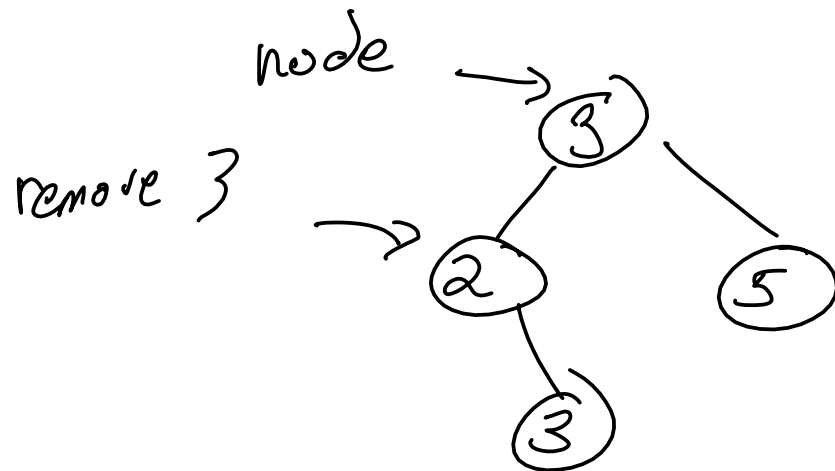

If node has no children ;  
return NULL

Else If node has one child:  
return node's child

Else :  $node \rightarrow key \leftarrow \max(node \rightarrow left)$

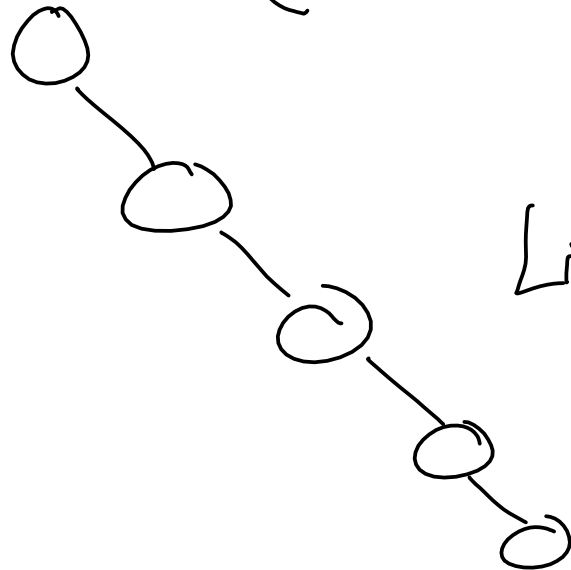

$\rightarrow$   $node \rightarrow contents \leftarrow \max(node \rightarrow left)$  contents  
 $node \rightarrow left \leftarrow \text{remove}(node \rightarrow left, node \rightarrow key)$   
return node
