

let a = ... in
let b = ... in
let c = ... in
...

Bitwise Operations in x64

and need both
 or need either
 xor need exactly one

Flipping bits

tool for clearing bits: $b_3 b_2 b_1 b_0$
 AND $\underline{1100}$
 $b_3 b_2 00$

setting bits: $b_3 b_2 b_1 b_0$
 OR $\underline{1100}$
 $11 b_1 b_0$

\neg not

$b_3 b_2 b_1 b_0$
 XOR $\underline{1100}$
 $\neg b_3 \neg b_2 b_1 b_0$

Lecture representation

true $\equiv 0x800 \dots 01$
 false $\equiv 0x000 \dots 01$
 int n $\equiv 2 \cdot n$

isbool(5) \Rightarrow false
 isbool(true) \Rightarrow true
 isbool(false) \Rightarrow true

$0x0 \dots 0A \Rightarrow 0x0 \dots 01$
 $0x8 \dots 01 \Rightarrow 0x8 \dots 01$
 $0x0 \dots 01 \Rightarrow 0x8 \dots 01$

$b_{63} b_{62} \dots b_1 b_0 \Rightarrow b_0 0 \dots 01$

shl rax, 63
 add rax, 1

$b_0 0 \dots 00$
 shl rax, 63
 or rax, 1

Cardinal

Semantics of
Bluebird

Compilation of
Bluebird

Semantics & Compilation
Cardinal

true + true \Rightarrow

error

1

runtime error

$0 \times 80 \dots 01 + 0 \times 80 \dots 01 \Rightarrow 0 \times 02 = \text{Bluebird } 1$

Cardinal Plus:

- ① compute left operand
- ② store left operand
- ③ check left operand
- ④ compute right operand
- ⑤ store right operand
- ⑥ check right operand
- ⑦ actually add

exit with error code 1

an integer was
expected (but
we got something else)

resources/

driver.c \leftarrow Avklet

printer.c \leftarrow Bluebird

error.c \leftarrow Cardinal

\uparrow
void stopWithError(int)

How do I call a C function?

rsp - register: stack pointer
 rbp - register: stack base pointer

not to scale

C function
 stack frame for bird-main
 ← rsp
 stack frame for main
 ← rbp

POSIX 64-bit C calling conventions

- ① **Caller**
 - a. push caller-saved registers (volatile registers)
 - rax, rcx, rdx, r8, r9, r10, r11
 - b. position arguments
 - first six args go in: rdi, rsi, rdx, rcx, r8, r9
 - other args go on stack
 - c. do call: call lbl
 1. push ret addr onto stack
 2. jump label
- ② **Callee**
 - a. push rbp
 - b. mov rbp, rsp
 - c. sub rsp, [...]
 - d. push callee-saved regs: rbx, rsp, rbp, r12, r13, r14, r15
 - e. do my thing
 - f. a-d in reverse
 - g. ret
- ③ **Caller**
 - a. pop args, saved regs from stack

<expr> ::= ... | print(<expr>)

print(5) → printing 5
 evaluating to 5
